Rob,

That's fine. Since they chose the earliest day possible, I don't expect you to have that ready. So long as you can participate, that's what really matters, for the technical discussion, within which you can expand on any of the July 3rd letter details wherein we already explained for example that you used the hardness and chloride for Piney Creek in calculating the more stringent sulfate standard. What I'm interested in, is letting them explain how removing sulfate and TDS stds addresses toxicity.
Janet
